

CAR AND TRUCK HOISTS BODY HOISTS AND SUPPORTS

Whiting Car and Truck Hoists, Body Hoists and Supports are made for lifting and supporting rail vehicles to improve the efficiency of underbody maintenance.

CAR HOISTS

Car hoists raise the entire rail vehicle (or multiple vehicles) to a convenient height for maintenance access to underbody components.

Options:

- 15-20 ton capacities
- Two or four lifting screws
- Synchronization, raised in sets or individually
- Direct Lift or Pass Through designs
- Regular pit depth or shallow pit designs

TRUCK REPAIR HOISTS

Similar to car hoists, truck repair hoists are used during the inspection and repair of rail vehicle trucks.

BODY HOISTS

Body hoists are designed and located within the maintenance facility's floor to match rail vehicle's lifting pad locations.

BODY SUPPORTS

Body supports are used to support a raised rail vehicle.

SPINNING POSTS

Car and truck hoists can also be supplied with spinning posts which allow a raised truck to be supported while its wheels are separated from the rail allowing truck wheel rotation.

Whiting rail products have been in use for over a century.
